What is HikCentral Access Control ?

HikCentral Access Control is a lightweight software for professional access control and time/attendance management. Featuring compatibility with virtually all Hikvision access control and video intercom devices, HikCentral Access Control makes daily access control and attendance management much simpler and more efficient.

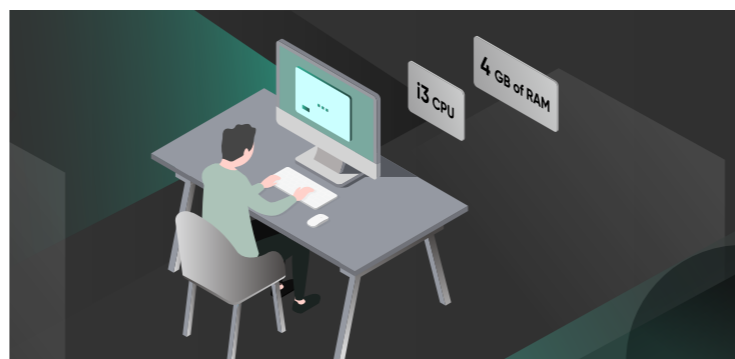

Benefits

1

Professional and flexible access control

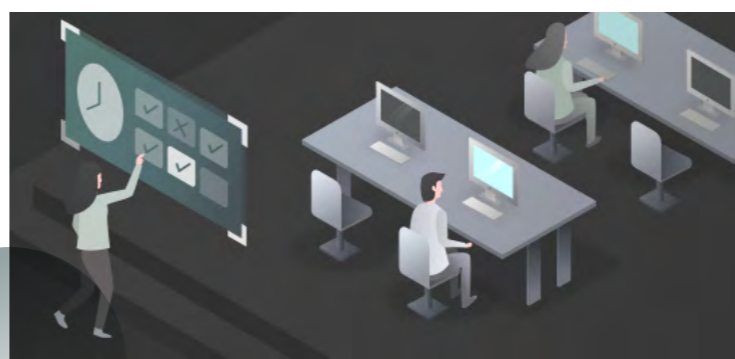

Specially designed for access control and attendance management needs, HikCentral Access Control software suits applications and scenarios of any size, making daily operations more efficient.

2

Lightweight and convenient

With the minimum hardware requirements – just an i3 CPU and 4 GB of RAM – users get full functionality via common web browsers, with no need to install a desktop client. What's more, users can also manage remotely with an intuitive mobile App compatible with both Android and iOS systems, adding to the flexibility.

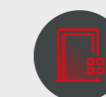

3

Easy to install and operate

With clear, step-by-step installation guidance and easy credential assignment and attendance rule-setting, management can quickly configure and run HikCentral Access Control based on actual needs.

Core functions

Comprehensive and flexible access control management

Customized access control systems offer 5 credential methods, including fingerprints, face recognition, ID cards, QR codes, and PIN codes, as well as 512 authentications to choose from, to suit hundreds of scenarios.

Advanced access strategies for sensitive areas, including multi-door interlocking, first person in, anti-passback, multi-factor authentication, and more.

Interactive E-Maps offer a dynamic view of multiple sites and access control device status all at the same time, as well as a shortcuts to handle events and alarms directly onboard.

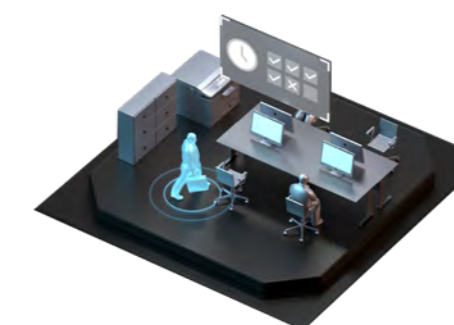

Convenient employee badge design and printing with essential information and access permissions, offering several unique styles and layouts to choose from.

Keep doors open in emergencies when the alarm system triggers roll calls of stranded personnel, contributing to on-going safety.

Time and attendance that's easier than ever

Flexible attendance rule-setting for normal, man-hour, multiple, or temporary shifts based on specific scenarios for offices, factories, stores, and more.

Diverse set of attendance report styles with 16 of the most common types to choose from. Users can also create personalized report templates based on their needs that can be exported in Excel, PDF, and CSV formats, among others.

Easy integration with third-party payroll systems via database, local files, or SFTP, and support for user-defined fields.
